Agrimarc Ltd. has developed a unique trials system - Target set, offering:

- The placement of fertiliser and additives under the tuber at planting
- In furrow applications
- Accurate spacing trials
- Standard Trials are a minimum of 4 metres of randomised replicated row lengths.
- Seed treatment with ethylene at standard and high temperatures
- Trials can be completed with unidentified varieties / products to ensure commercial independence is maintained

The results are presented in a filtered spreadsheet to allow instant access to individual varieties, treatments, yields and tuber numbers or a combination of each. All trials tailored to customers individual requirements.
